9. Introduction

Automated Anonymity (AA) is your all in one toolkit for achieving and maintaining digital anonymity on Kali Linux. Whether you are a cybersecurity professional or a privacy conscious user, AA simplifies complex configurations into an automatic, easy to use setup. This manual provides thorough instructions on installing, configuring, and using AA in both its free (normal) and paid (advanced) forms.

## **1. System Requirements**

- Operating System: Kali Linux (preferably a fresh install)
- Hardware: Minimum 2GB RAM, 20GB free disk space
- Privileges: Root access or sudo privileges
- Internet Connection: Required for updates and downloading dependencies
- Additional Software: Git, Tor, ProxyChains, I2P, OpenVPN (for advanced features)

## **2. Licensing**

### **3.1 Free Version License**

The Free version of AA is distributed under an open-source license (e.g., MIT License). This means:

- **Usage:** You are free to use, study, and modify the source code.
- **Redistribution:** You may share the code, but any modifications must also include the original license.
- **No Commercial Use:** For those who wish to integrate into commercial products, consider upgrading to the Pro/Elite version.

#### Key Points:

- Full transparency for the community.
- Ideal for personal use and educational purposes.
- Support is community-driven through forums and documentation.

### 3.2 Pro/Elite Version License

The Pro/Elite versions of AA are distributed under a proprietary license. This license:

- **Usage Restrictions:** Allows use only under the specified conditions; modification, redistribution, or resale is strictly prohibited.
- **Support:** Includes priority, direct support from the developer.
- **Updates:** Entitles the user to automatic updates and security patches.
- **Access:** Advanced features (e.g., real-time IP rotation, AI-powered obfuscation, zero-trace anti-forensics) are exclusive to paid users.

#### Key Points:

- Designed for professionals requiring advanced security.
- Pro version: One-time fee of \$50.
- Elite version: \$30/month subscription.
- Dedicated support and periodic updates (major updates every 6 months).

#### 1. Installation & Setup

### 4.1 Normal (Free) Version Installation

#### 1. Download & Clone the Repository:

- Visit the public GitHub repository: <https://github.com/300LBHACK3R/AA>
- Clone the repository onto your Kali Linux machine:  

```
git clone https://github.com/300LBHACK3R/AA.git
```

```
cd AA
```

#### 2. Run the Basic Setup Script:

- Ensure the script has executable permissions:  

```
chmod +x Scripts/Setup.sh
```
- Run the script with root privileges:  

```
sudo ./Scripts/Setup.sh
```
- The script will:
  - Check for root access
  - Fix DNS issues (if needed)
  - Update the system and install required packages (Tor, ProxyChains, MACchanger, etc.)

- Configure ProxyChains and set up automatic MAC address spoofing
- Start the Tor service

## **4.2 Advanced (Pro/Elite) Version Installation**

1. Download the Paid Package:
  - After purchase, you'll receive a secure download link or access to a private repository containing the advanced version.
  - Download the package and extract it to your system.
2. Run the Advanced Setup Script:
  - Ensure the script is executable:  
`chmod +x Scripts/AdvancedSetup.sh`
  - Run the script with root privileges:  
`sudo ./Scripts/AdvancedSetup.sh`
  - This script will:
    - Install and start I2P
    - Provide instructions to configure VPN-over-Tor (by placing your OpenVPN config in `/etc/openvpn/` and running the relevant command)
    - Offer guidance for integrating with a Whonix Gateway
    - Enable additional proprietary security features exclusive to the Pro/Elite version
3. **How to Use Automated Anonymity (AA)**

## **5.1 Normal (Free) Version Usage**

- Secure Browsing:  
All your traffic is automatically routed through the Tor network. To test, run:  
`proxychains4 curl https://check.torproject.org`
- Basic Encrypted Messaging:  
Use the provided open-source messaging module to securely send and receive messages.
- Automatic Configuration:  
The setup scripts require no further manual configuration—just install and use.
- Community Support:  
Access support via our community forums and GitHub Issues.

## **5.2 Advanced (Pro/Elite) Version Usage**

- Enhanced Secure Browsing & IP Rotation:  
The Pro version dynamically rotates your IP address during sessions.
- Advanced Encryption Suite:  
Benefit from enhanced encryption protocols in messaging and data protection. Access detailed settings through the proprietary configuration panel.
- Automatic Updates:  
Run the auto-update module to always have the latest, most secure version:  
`sudo python3 Python/AutoUpdate.py`

- **Priority Support:**  
For technical issues, contact our support team via the dedicated support portal.
- **Exclusive Firewall Hardening & VPN Over Tor Integration:**  
This adds extra layers of protection to secure your network. To review the firewall rules, run:  
`sudo python3 Python/FirewallConfig.py`
- **Elite Exclusive Features (Subscription):**
  - Zero-Trace Anti-Forensics – Ensures no residual data remains.
  - AI-Powered Traffic Obfuscation – Masks your network traffic using AI algorithms.
  - Customizable Advanced Privacy Settings – Fine-tune security configurations.
  - Dedicated Enterprise Support – Enhanced support for critical issues.

## 1. Feature Breakdown

### 6.1 Free Version Features

- **Open-Source Core:** Built with community-trusted technologies.
- **Secure Browsing:** Uses Tor to anonymize all internet traffic.
- **Basic Encrypted Messaging:** Implements open-source encryption for secure messaging.
- **No Manual Configurations:** Fully automatic setup.
- **Designed by a Cybersecurity Professional:** Developed by Tate Byers (AKA 300LBHACK3R).
- **Community-Driven Support:** Access support through forums and GitHub Issues.

### 6.2 Pro Version Features (\$50 One-Time Fee)

Includes everything in Free, plus:

- **Real-Time IP Rotation:** Automatically rotates your IP address.
- **Advanced Encryption Suite:** Upgraded encryption protocols for secure messaging and data protection.
- **Automatic Updates:** Major updates released every 6 months.
- **Priority Support:** Direct email assistance with faster response times.
- **Exclusive Firewall Hardening & VPN Over Tor Integration:** Extra layers of network security.

### 6.3 Elite Version Features (\$30/month Subscription)

Includes everything in Pro, plus:

- **Zero-Trace Anti-Forensics:** Advanced measures ensuring no residual data is left.
- **AI-Powered Traffic Obfuscation:** Uses AI to effectively mask your network traffic.
- **Customizable Advanced Privacy Settings:** Fine-tune your security and encryption parameters.
- **Dedicated Enterprise Support:** Enhanced, round-the-clock support for critical issues.

#### 1. Troubleshooting & FAQs

Common Issues:

- **Tor Not Running:**  
Check the status with:  
`systemctl status tor`  
Restart if necessary:  
`sudo systemctl restart tor`
- **ProxyChains Configuration Errors:**  
Ensure that `/etc/proxychains4.conf` contains the line:  
`socks5 127.0.0.1 9050`
- **Auto-Update Failures:**  
Verify network connectivity and ensure the repository URL in the auto-update script is correct.

#### Frequently Asked Questions:

- **Do I need to configure anything after installation?**  
No, AA is designed to work automatically after running the setup scripts.
- **How often are updates released?**  
Major updates are released every 6 months, with optional minor patches as needed.
- **How do I access premium support?**  
Pro and Elite users can contact support via the dedicated email and support portal provided upon purchase.
- **Can I customize the free version?**  
Yes, the free version is open-source and customizable under the provided license terms.

#### 1. Contact & Support
